

# Front-end Developer

Are you an ambitious front-end web developer who can offer a distinctive contribution in a complex software environment? Are you seeking a new challenge in realizing user-friendly web applications for the financial world? Please read on and see if you are ready to join our company.

## The position

You make distinct contributions in the realization of new functionalities within our Java Enterprise web platform, used by our clients for the simulation of investment portfolios and financial advice to consumers. Your added value is at the front-end; you create a customer-friendly user interface. You will not be alone in this, as you daily and intensively work together with professional information analysts, developers and test analysts in a Scrum team of 5 persons. Besides the Scrum Team you will have frequent contact with the stakeholders.

You know the meaning of software craftsmanship and put this into practice. You are familiar with the possibilities of JavaScript and follow, just like we do, related IT trends. You frequently share your insights with colleagues in knowledge and brainstorm sessions. There is also room to further expand your knowledge and expertise. That way you will contribute to the innovation of our products!

## Requirements

You have completed an academic or college degree in a technical field, about 3 years of work experience in a professional environment web applications and are interested in the financial world. Naturally, you worked with Agile / Scrum before. You have documented experience with Java, AngularJS, JavaScript/TypeScript and Less/CSS. You have a passion for front-end development, but experience with UX and UI design is preferred. Knowledge of and/or experience with Java, REST, JSF and relational databases are appreciated.

You also possess:

- excellent conceptual and innovative skills;
- strong communication skills;
- a practical attitude and the ability to collaborate (team player);
- ambition and result-oriented;

## What we offer

We offer you a suitable job within a challenging and inspiring work environment with excellent career and professionalization opportunities, both in different specializations and in project and account management. Ortec Finance gives you the chance to combine IT, mathematical models and specific market knowledge in your work. You earn a market-conform salary, 8% vacation allowance, a fixed 13<sup>th</sup> month, a contribution to the pension scheme, travel expense compensation and a bonus policy.

## About Ortec Finance

Since 1981 Ortec Finance has been delivering technology and consultancy in the field of risk and return management, in the last decade increasingly on a global scale. Ortec Finance supports pension funds, insurers, asset managers, financial

planners, housing associations and municipalities among others in making financial decisions and monitoring the results thereof. We integrate our in-depth knowledge in our software models and combine these with professional consultancy services. Ortec Finance remains innovative due to its close ties with the academic world, supervisory agencies and professionals. Our main offices are located in Amsterdam and Rotterdam, with international satellite offices in the United Kingdom, Switzerland and Canada.

In our product development process we design and develop decision-support simulation systems for the financial sector. The purpose of these systems is to support our clients in determining and executing their strategic policy. We use and develop only our own models and do not work on secondment. In order to create high-quality systems we combine modern development tools with solid knowledge of the financial markets. All our employees follow a financial training program.
