

.NET Software Developer

Would you like to use your development skills to build high quality web solutions for the top of the travel industry in Europe? Then we are looking for you!

As a software engineer at NetMatch you are responsible for the creation of the newest versions of websites and services of large tour operators. You will apply your programming skills in delivering superior software solutions. The high-volume websites we create are built using the latest technologies, contain many complex features and must be capable of processing large amounts of data. This means you will work in challenging projects using the latest tools and technologies related to web, cloud, microservices and many others.

In this challenging environment, you can make an impact and develop your technical and personal skills. Do you want to contribute to the future of the online travel market?

What we promise

- Specialized work environment with experts you can learn from
- Opportunities to follow training courses, obtain certifications and attend technology seminars
- 25 vacation days (with the option to buy more)
- Discount on holiday trips
- Social events with colleagues, like team lunches, hackathons, and sports/game/music events

What we ask

- Passion and interest for innovation, new developments and personal growth
- Strong affinity for web development
- Experience with OOP, C#, ASP.NET MVC/Core
- Higher education in computer science (HBO/University)
- We have an international working environment, so your English skills are good

NetMatch offers more than just a workplace. You will work in a highly motivated team with an open, informal and friendly work atmosphere. You will receive the support you need to grow, and colleagues are open for your fresh insights. Besides that, you will work in a dynamic, internationally oriented environment with offices in Amsterdam, Tilburg and Cluj-Napoca (Romania).

Our achievements

These are things we are very proud off, and you can be part of this success!

- The first .NET based travel website in the Netherlands was launched back in 2001; NetMatch developed this website.
- In travel we deal with the challenges of peak traffic. On a busy day our client websites get 150,000 visitors leading to almost 1,500 bookings.
- Since 2018 we organize a yearly hackathon. This is a fun day of cooperative programming.
- We develop microservices for our cruise clients and host these on Service Fabric clusters.
- As soon as new tools like Visual Studio are released, you can use them at NetMatch.
- We are building .NET Core microservices and deploying them as containers on Kubernetes.
- With open source search technologies such as SOLR we ensure a super-fast search on Corendon.nl.
- NetMatch colleagues like to spend time on exploring new techniques. We even have one official day per month that you can use for innovation. You can then choose your own inspiring project to work on.

Interested?

Will you be challenged in this position? Then send your application to Annemoon van Casteren (HR Advisor) via a.vancasteren@netmatch.nl. For questions please contact us at this email address or at +31 (0)13 5811 088.
